

Professor Sir Peter Horby, Professor Sir Martin Landray
RECOVERY trial Co-chairs
Nuffield Department of Population Health
Oxford
3rd December 2021

Dear Peter and Martin

RECOVERY trial DMC Chairman's review report

I reviewed the RECOVERY trial safety and efficacy data that were available today for the 45,246 patients randomised; that total includes 98 women who were pregnant at entry and 321 children.

For the interventions still in active recruitment, the numbers of adults included in the comparison of each agent with its control were respectively: baricitinib (7,603), high dose steroids (732) and empagliflozin (2,227).

The numbers of children included in the comparison of each agent with its control were: tocilizumab (55), anakinra (21) and baricitinib (30).

In the light of the available trial data and all relevant external information, I saw no cogent reason to modify the protocol or intake to the study.

As planned, the full DMC will next meet to review the safety and efficacy data for all treatments on 14th January 2022.

Yours sincerely

Professor Peter Sandercock, MA, DM, FRCPE, FESO, FWSO
Chairman RECOVERY trial DMC
Emeritus Professor of Medical Neurology, Centre for Clinical Brain Sciences

Cc DMC members, RECOVERY trial office.
