Oxford

28th May 2026

Dear Peter and Martin

RECOVERY trial DMC report

Today we reviewed the RECOVERY trial safety and efficacy data that were available for patients randomised by 11th May 2026.

For the interventions for influenza, the numbers of individuals included in the comparison of each agent with its control were respectively: Baloxavir marboxil (1361), Oseltamavir (458) and Dexamethasone (571).

The comparison of dexamethasone with its control in community acquired pneumonia included 1930 patients.

The dataset included 2 woman who were pregnant at entry and 16 children.

In the light of the available trial data and all relevant external information, we saw no cogent reason to modify the protocol or intake to the study.

The DMC will next review the data for all treatments in about 6 months time (or sooner if there is a marked increase in recruitment).

Yours sincerely

Professor Peter Sandercock, MA, DM, FRCPE
Chairman RECOVERY trial DMC
Emeritus Professor of Medical Neurology, Centre for Clinical Brain Sciences

Cc DMC members, RECOVERY trial office.
